

EMAIL SET-UP FOR BLACKBERRY FASTMAIL SERVICE

BlackBerry Fastmail Service Version 2 has been enabled for you. If you configured your device before our switch to the new server (2/19/2010), you may need to complete the device setup again to realize the performance increase now available.

Direct Access to Sent and Spam Mail Folders

You can configure your BlackBerry device to open mail from your sent folder (or spam folder) directly in your inbox. Simply configure the device to log into email using your email address, plus /sent or /spam, as the username (for example, user@mydomain.com/sent).

BlackBerry Level 3 Integration

If Research in Motion (RIM) recognizes you as a Mail Service Provider (MSP), this server can answer subscription requests at the following URLs:

<https://mail.mydomain.com:2096/rim-bis/v1>

OR

<https://webmail.mydomain.com/rim-bis/v1>

Note: For security reasons, these URLs can only be accessed by a server running BIS.

PLEASE SAVE FOR FUTURE REFERENCE.
